Subject: Application for PhD Position – Explainable and Traceable Hybrid Model Management for Digital Twins

Dear Hiring Committee,

I am applying for the PhD position on "Explainable and Traceable Hybrid Model Management for Digital Twins" with great enthusiasm. With a strong engineering background in Artificial Intelligence, distributed computing, and complex system modeling, I am highly motivated to contribute to the Artemis framework and tackle the unique challenges presented by this project.

Managing the lifecycle of hybrid models requires rigorous traceability. Having engineered multi-layered systems combining thermodynamic physics engines with Edge-TCN anomaly detection, I understand the friction involved in tracking model versioning and data provenance. I am eager to apply Model-Driven Engineering practices to establish explainable and auditable management pipelines for these complex, hybrid simulations.

I am particularly drawn to this position because it bridges rigorous research with practical industrial challenges within the EDT program. Please find attached my resume and academic transcripts, which detail my technical competencies and engineering background. I welcome the opportunity to discuss my application further.

Sincerely,

Ismail Aissaoui
