Hiring Committee
Technical University of Munich
Munich, Germany

To the Hiring Committee,

I am writing to express my strong interest in the PhD position in Medical AI for Clinical Language Models and Temporal Disease Modeling. As an AI Engineer specializing in medical deep learning and Natural Language Processing (NLP), I am eager to contribute to the advancement of temporal modeling for oncology at TUM.

My experience lies precisely at the intersection of medical temporal modeling and advanced deep learning. In my "Cardiovascular Medical Digital Twin," I developed the **SST_KODA_MultiScale** architecture and **Medical_MambaTS** to process high-frequency 100Hz clinical telemetry data for temporal disease forecasting. I also engineered a Missingness-Aware Gate to handle real-world clinical data sparsity. Furthermore, my extensive work in NLP, utilizing PyTorch Geometric and SBERT for semantic text processing, provides me with the strong programming foundation necessary to develop sophisticated clinical language models.

I look forward to bringing my expertise in temporal disease modeling and robust PyTorch pipelines to oncology research at TUM.

Sincerely,

Ismail Aissaoui
