Hiring Committee
Uppsala University
Uppsala, Sweden

To the Hiring Committee,

I am writing to express my strong interest in the PhD position in Machine Learning focusing on Data-Driven Precision Medicine. As an AI & Data Science Engineer with a deep foundation in medical machine learning and mathematical modeling, I am highly motivated to explore uncertainty quantification in healthcare applications.

In my recent work on the "Cardiovascular Medical Digital Twin," I developed robust predictive models (such as **Medical_MambaTS** and **PI_DeepONet**) for ICU patients using 100Hz telemetry data. A critical component of precision medicine is dealing with real-world uncertainty; to address this, I engineered a Missingness-Aware Gate to handle sensor dropouts dynamically without compromising prediction stability. My strong mathematical background allows me to deeply understand the probabilistic and statistical foundations required for rigorous uncertainty quantification in deep learning.

I am eager to apply my PyTorch expertise and my passion for precision medicine to advance data-driven healthcare at Uppsala University.

Sincerely,

Ismail Aissaoui
