June 15, 2026

Dear Sachse and Georgopoulou,

I am writing to express my strong interest in the PhD position on embodied intelligence through material, mechanics, and computation at the Max Planck Gesellschaft. With a Master's degree in mechanical engineering and a passion for robotics, I believe my skills and research experience make me an ideal candidate for this opportunity.

In my previous work, I developed *MedicalMambaTS*, a linear-time state space model capable of providing sub-millisecond bedside inference. This achievement resonates with the focus on adaptive materials and computational design.

I am particularly drawn to this project because it combines my interests in robotics, materials science, and computation. As an AI Data Science Engineer, I have a strong foundation in machine learning and programming languages such as PyTorch and Python. I am confident that my skills will enable me to contribute significantly to the development of adaptive materials and computational design methods for embodied intelligence.

I look forward to discussing my application with you further. Please do not hesitate to contact me if you require any additional information.

Sincerely,

Ismail Aissaoui
