

June 17, 2026

Dear PhD Admissions Committee,

I am writing to express my strong interest in pursuing a PhD in Decision Making for Complex Systems at the University of Cambridge. With my background in AI and Data Science Engineering, I am confident that this program will provide me with the ideal platform to develop my research skills and contribute meaningfully to the field.

As an engineer, I have had the opportunity to work on various projects that involve decision-making in complex systems. One project that stands out is the development of *MedicalMambaTS*, a linear – time state space model for sub – millisecond bedside inference. This project allowed me to work with medical professionals to develop a predictive model that aligns perfectly with the focus on decision – making in complex systems.

Another project that I am proud of is *PI_{Deep}ONet*, a 0D Windkessel Physics – Informed Operator Network using PyTorch Autograd. This project allowed me to work with physical constraints in informed neural networks (PINNs) in this project has shown great promise in predicting complex systems, with

I am excited about the opportunity to join the University of Cambridge's Department of Computer Science and Technology and contribute to the research in decision making for complex systems. I am confident that my skills and experience make me a strong candidate for this program.

Sincerely,
